Devops Assignment  
Full Summary

Topic - Course 3 (CI/CD Pipeline - Devops/Jenkins)  
(Udemy).

Section - I  
Introduction

In this course, we learned about  
base introduction of devops, in  
continuous delivery, continuous integration  
etc.

Devops improves collaboration & by introducing  
by automations immitations & work  
and continuously meaning application performance.

Continuous Delivery is the thing of continuously  
maintaining cycle and code in deployable  
state.

It is the keeping the code in a  
deployable state. Continuous delivery  
is the practice of frequently  
deploying small code change to  
production.

Continuous integration frequently merging  
the code. can be done by  
developer, we do for

Early detection of certain type of bugs to make frequency of release possible. Continuous code inspection means constantly scanning the code so that one came to the developer's ear if any in the code.

If the process of an automated code review or inspection for your code before the code test. As we seen in the in this we seen about the short .. carriers .

In this further we studies about Jenkins and how to use it on localhost and then then displaying the code and connecting it with git and java and maven and then then uploaded an git file and giving its URL and then then Build it and then wait for it to Build. and if its success the c/c++ pipeline. and then keeping it ready for deployment everywhere.
